The Codex. NakGas, easy to read.

Three sections for three readers. Section 1 is for anyone: a household, a dealer at the counter, an investor with ten minutes. Section 2 is for professionals: dealers, KPDN, the developer, anyone reviewing a delivery platform. Section 3 is how the app shows it, screen by screen. How it looks lives on the Design tab; the screens run live on The App.

✓ Checked against the documents

· Background

How to read every picture: the six kinds of thing.

One icon per kind, the same everywhere on this page. Summary tells them apart; Detailed adds what each one holds and the plain comparison, on the Think line.

Person

Five

Who is around one order.

- Customer
- Dealer, shop operator
- Driver
- Admin
- KPDN

Think: The people on one delivery.

Product

Three

What is ordered.

- 14 kg household, swap or new
- 12 kg, selected brands
- C50 commercial, Phase Two

Think: The cylinder at the door.

Order

Four states

What the engine moves.

- Confirmed
- Dealer assigned
- Out for delivery
- Delivered

Think: One job, four pings.

Money

Three lines

What the bill shows.

- Controlled price RM26.60
- Delivery fee, the dealer’s
- Platform fee, once per order

Think: The law’s line first, the fee last.

Place

Two kinds

Where it goes.

- Landed house
- High-rise: floor, lift, unit

Think: What the driver knows before the road.

Phase

Two

When it is built.

- Phase One · five weeks
- Phase Two · not priced

Think: The build calendar, relative to the deposit.

?

Eleven questions for Navin, with our answer on each.

Nothing in the prototype waits on them: each one has a sample value marked "to confirm". Under each question: what was done meanwhile, and the answer Brand Method would give if the call were ours. The first five close the launch; the rest close the product.

1 Question for Navin

Is NakGas the name?

Meanwhile Brand Method set it on 20 Oct 2026 on Bazil's instruction ("change the name all to NakGas"), after Gas Sekarang on 6 Oct and Gaslah on 12 Oct. Checked 20 Oct: nakgas.my and nakgas.com.my available (MYNIC RDAP); nakgas.com not registered (Verisign RDAP, whois no match); App Store Malaysia: "nakgas" returns no app and "nak gas" one unrelated game; Google Play Malaysia: no app named NakGas. The flame turned green with its mint inner cone the same day; the all-blue set stays as a variation.

Our answer Yes. "Nak gas" is what a household says the moment the cylinder runs out: I want gas. The name is the moment of need and the app is the answer, in six letters. MyIPO, the

2 Question for Navin

Which fee: RM3.00 with the gateway absorbed, or RM3.50?

Meanwhile The prototype shows RM3.50 as one "Platform & processing fee"; the admin can switch to RM3.00. The Competitors tab is the price audit.

Our answer RM3.50, labelled honestly, once per order. RM0.50 covers the gateway and the label says so; the customer still pays under RM34 for a cylinder.

3 Question for Navin

What are the delivery fee tiers for high-rise addresses?

Meanwhile The address screen captures floor, lift and unit; the admin settings hold a landed and a high-rise rate per area, blank.

Our answer Let each dealer set a landed and a high-rise rate for its area, both shown before payment. One rule, no surprises at the door.

handles and Navin's yes are the next checks.

4 Question for Navin

Johor Bahru first, then where?

Meanwhile Every sample address and the supplier map are Johor Bahru.

Our answer Johor Bahru, one district at a time, dealers before customers. The second city only when a district runs itself.

5 Question for Navin

When does the deposit land?

Meanwhile Week 1 is the Monday after it clears; no page carries a calendar date. The Apple Developer account takes 15 to 20 days to approve.

Our answer The day the deposit lands, open the Apple, Google, gateway and SMS accounts in the company's name. The store clock starts then, not in Week 5.

6 Question for Navin

Which brands are carried, and may their names and logos appear?

Meanwhile PETRONAS, Petron and MyGaz are sample chips in the prototype; no logo is drawn.

Our answer Brand names as text until the rights are in writing. The app sells the dealer's stock, not a brand.

7 Question for Navin

What are the rewards and referral values?

Meanwhile Placeholders: points and a referral link with sample numbers.

Our answer Decide after the fee. One simple rule, such as points on the gas line, and a first-thousand promo with an end date.

8 Question for Navin

Which legal entity signs and owns the stores?

Meanwhile "VIN Industries" is the working name; no company by that exact name was found in public sources (27 Sep). The NDA carries his NRIC.

Our answer The registered entity, exactly, on the quotation and on both store accounts. Nothing is submitted in a personal name.

9 Question for Navin

Is 12 kg in, and at what price?

Meanwhile Shown as "selected brands" and disabled; the price is to confirm.

Our answer In, where the brand offers it, at the dealer's price shown before payment. The hero stays 14 kg.

10 Question for Navin

Which smart regulator, and when?

Meanwhile Phase Two, teased on one screen; weight based or regulator based through Tuya; safety questions open.

Our answer After the first thousand orders. Bench test two devices with a dealer first; the data model is ready either way.

11 Question for Navin

What if drivers will not use the app?

Meanwhile The dealer app is drawn with the photo proof and the cash mark; the messaging fallback is a Phase Two option.

Our answer Keep the app: the photo and the cash mark need it. Watch adoption in the first month and build the WhatsApp accept flow only if the numbers say so.

1

For everyone. What NakGas does, in plain words.

NakGas is the gas dealer you already trust, now in your phone. You order a cylinder in two taps, the nearest licensed dealer accepts within 45 seconds, the price the government sets is the first line of your bill, and you never call around again. No app words needed.

1

Order in two taps.

Your usual cylinder, reordered from the home screen: Reorder, then Pay.

Home · Order

2

The fair price, shown first.

The KPDN controlled price is the first line of every bill, then the delivery fee, then one small fee.

Checkout

3

Your usual dealer, not a stranger.

Licensed local dealers deliver, the ones already on the road. You see a name and a plate, never a number.

Delivery

4

Never caught mid-cook.

A reminder from your own rhythm now; the smart regulator that reads the balance in Phase Two.

Reminder

A month with NakGas

Aisyah lives in Taman Molek, Johor Bahru, in a landed house, and cooks every evening. This is one ordinary month, told with the prototype's own sample order.

1

Day 1, 6:40pm

The flame is low. She opens the app, picks Bahasa Malaysia, types her number, enters the six digit code, saves the address. Order gas: swap, 14 kg, one cylinder, now.

2

6:41pm

The bill before she pays: RM26.60 the controlled price, RM3.40 delivery, RM3.50 one platform fee. RM33.50, cash at the door.

3

6:41pm

The nearest dealer with stock has 45 seconds. Kedai Gas Seri Molek accepts in six. She sees the dealer's name and the truck plate, never a phone number.

4

7:25pm

Confirmed, dealer assigned, out for delivery, delivered. The driver photographs the cylinder at her gate; the photo and the receipt stay in her order.

5

Day 2

Four stars and a tag, "on time". The next reminder is set from her own rhythm, about 28 days.

6

Day 26

"Time to reorder?" lands on the lock screen. Day 27: Reorder, then Pay. Two taps. The same dealer is the nearest again.

Built from the prototype's screens, Customer app · the bill from the call of 1 Oct 2026 · the reminder is a simple scheduled push in Phase One

Who does what around one order

Person	What they do	What they never do
The customer	Orders, pays online or in cash, rates the delivery, keeps the receipts and the photo proof.	Choose a dealer, or see a driver's phone number. The platform assigns the nearest.
The dealer, shop operator	Goes online, accepts or declines within 45 seconds, keeps stock and the delivery radius current, sees the wallet.	Pay a commission. The gas price and the delivery fee are the dealer's in full.
The driver	Confirms each status, takes the photo at the door, marks cash collected.	Close an order without the photo. The proof is mandatory.
The admin	Approves new dealers, watches licence expiry, assigns an order declined four times, settles payouts weekly, sets the fee and the radius.	Change the controlled price. KPDN sets it; the app prints it.
KPDN	Licenses the dealers and sets the controlled price: RM1.90 a kilo, RM26.60 for 14 kg, from 8 Apr 2026.	Appear in the app. Its rules shape every bill and every onboarding.

Source the prototype (order engine, dealer onboarding, admin approvals) · the call of 1 Oct 2026 (no commission) · the audit, Trust and compliance

Questions customers ask, answered

– Who delivers my gas?

The KPDN licensed dealer nearest you with stock. You see the dealer's name and the truck plate, never a personal phone number.

– What does it cost?

The gas is the KPDN controlled price, RM26.60 for a 14 kg cylinder. The delivery fee is set by the dealer and shown first. One platform fee is charged per order, not per cylinder. All of it before you pay.

– Can I pay cash?

Yes. Cash on delivery, or FPX, card and e-wallet in the app.

– I live in a high-rise. What changes?

Your address stores the floor, the lift and the unit, so the driver knows before setting off. Any extra charge is the dealer's and shown before you pay. The tiers are still to confirm.

– Can I cancel?

Yes, before the dealer sets off. The cancellation rules sit in Profile.

– Is it in Bahasa Malaysia?

Yes. You choose Bahasa Malaysia or English on the first screen, and can change it in Settings. The dealer app has both; the admin portal is in English.

– What about safety?

Safety tips sit in Profile and on Home. A healthy flame burns blue; the smart regulator that reads the gas balance is Phase Two, not in this build.

Source the prototype (checkout, address, profile, help) · the brief of 6 Oct 2026

2

For professionals. How dealers, regulators and investors read it.

A dealer, a KPDN officer, an investor or the developer does not ask what the app looks like. They ask three questions, in this order, and place a delivery platform by its answers.

1

Is the bill legal?

Price

KPDN requires the lines unbundled. Every bill prints the controlled price first (RM26.60 for 14 kg, set 8 Apr 2026), then the dealer's delivery fee, then one platform and processing fee per order. Nothing is folded into the gas price, and the customer sees all three before paying. The fee itself, RM3.00 or RM3.50, waits on the price audit.

2

Who carries the money?

Model

No commission: the gas price and the delivery fee are the dealer's in full. The platform fee is the platform's, once per order. Online payment runs through one Malaysian gateway on the company's account, about 2 percent on the highest channel, about 67 sen on RM33.50. Cash orders are marked collected by the driver and the fee is netted against the dealer's wallet: our read, to confirm. Payouts weekly, a sample cadence.

3

Will dealers accept?

Supply

The order goes to the nearest available shop or truck with stock, with 45 seconds to accept. A decline or a timeout moves it to the next nearest; four in a row escalate to an admin who assigns by hand. Dealers join with a KPDN licence, SSM and a bank account; the licence expiry is tracked and flagged, and an expired licence receives no offers. Seasoned drivers who will not use an app are the known risk: the messaging fallback is a Phase Two option.

Everything NakGas does, and how it connects

Pick a module. Its people, what it holds, when it is built and the screens that carry it come up, and the modules it feeds are marked.

The order path, as the engine runs it

1

Order

Swap or new, size, quantity, now or a slot. The bill shown before payment.

2

Offer

The nearest available dealer with stock gets 45 seconds. Location is read only while the dealer is online.

3

Accept

Accept, or decline and the next nearest is offered. Four declines in a row: an admin assigns.

4

Deliver

Status pings from the driver's confirmations: confirmed, assigned, out for delivery, delivered. No live GPS for the customer in Phase One.

5

Prove

A photo at the door, mandatory. Cash marked collected. The receipt to the customer.

6

Settle

The wallet: gas and delivery to the dealer, the fee to the platform, cash orders netted. Weekly payouts approved in admin.

Source the SOW v1.1 and Navin's decks (the engine) · the call of 28 Sep 2026 (time based status, not live GPS) · the prototype

What waits for Phase Two

Not priced, not in the five weeks. The data model is built ready for them.

Phase Two

The smart regulator

Weight based or regulator based, through Tuya: the gas balance read before the flame changes, and a predictive reorder. Device and safety questions open.

Phase Two

A live map for the customer

The driver on a map instead of four statuses. The dealer app already captures location while online.

Phase Two

Drivers without the app

A WhatsApp or Telegram accept flow for drivers who will not install anything, if adoption shows the need.

Source the brief of 6 Oct 2026, Phase Two · the call of 28 Sep 2026 (the messaging fallback)

Who does what, against the other ways to get gas

Capability	NakGas	Phone the dealer	A brand's own app	A marketplace app
Who delivers	The nearest licensed dealer, assigned	Whoever picks up	That brand's network	Whoever lists

34 screens in seven groups, counting the phone’s home screen, read from the prototype’s own data.

One name each, one goal per screen

Every screen answers one question. Phase One is the five week build; Phase Two is marked where a screen only teases it.

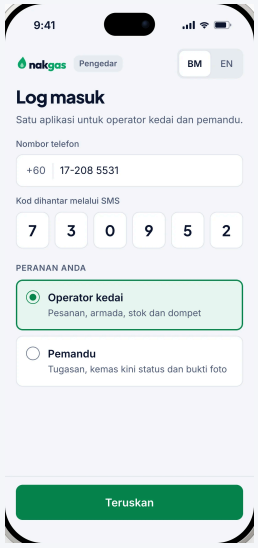

Screen	Its one goal	Built
device	The phone, before the app	The phone
c-splash	Splash: First open: the flame, the name and the promise	Phase One
c-lang	Language picker: Shown once on first open and sets the whole app	Phase One
c-otp	Phone and OTP: A phone number and a six digit code by SMS	Phase One
c-address	Address: Landed or high-rise	Phase One
c-home	Home: The usual order, the reorder reminder and one Order button	Phase One
c-order	Choose the gas: Swap or new cylinder, size, brand and quantity	Phase One
c-when	Now or scheduled: Now goes straight to the order engine	Phase One
c-checkout	Checkout: The KPDN controlled price is the first line, then the delivery fee, then one platform and processing fee per order (option B, RM3.50, pending the price audit)	Phase One
c-pay	Payment: FPX, card or e-wallet through one Malaysian gateway, or cash on delivery	Phase One
c-find	Finding a dealer: The engine offers the order to the nearest available dealer with stock, who has 45 seconds	Phase One
c-track	Tracking: Confirmed, dealer assigned, out for delivery, delivered	Phase One

c-done	Delivered: Photo proof taken by the driver at the door, and the receipt with the same three lines	Phase One
c-rate	Rate: Stars, quick tags and an optional comment	Phase One
c-orders	Orders: History with one tap reorder: Reorder, then Pay	Phase One
c-rewards	Rewards and referral: Points and a referral link	Phase One
c-profile	Profile and settings: Language any time, the reminder rhythm, order updates, help and safety tips, cancellation rules, privacy	Phase One
c-help	Help with an order: Pick what went wrong, add a note, and the NakGas team answers in the app	Phase One
c-receipt	Receipt: The full receipt with the three lines, the dealer and the payment, saved as a PDF	Phase One
c-safety	Safety tips: What to do if you smell gas, and the everyday habits: upright cylinder, regulator off after cooking, open windows	Phase One
c-cancel	Cancellation rules: Free to cancel until the dealer sets off; after that the team handles it	Phase One
c-privacy	Privacy and consent: What NakGas keeps and why, consent switches (order updates, offers, location for the pin), and a request to delete the account	Phase One
c-iot	Smart regulator: Phase Two teaser, not in Phase One and not priced: a smart regulator reads the gas balance so the reorder can be predicted	Phase Two
d-login	Login and role: Phone and OTP, then the role: shop operator or driver	Phase One
d-onboard	Onboarding: KPDN licence upload with its expiry date, SSM, bank account and radius	Phase One

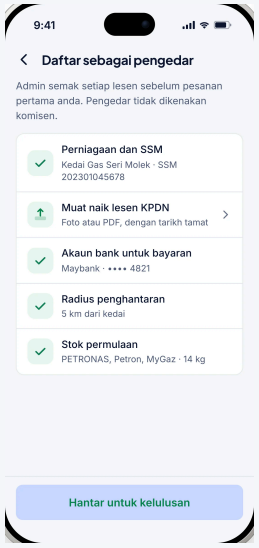

d-home	Home: Online or offline, today’s earnings, stock at a glance	Phase One
d-incoming	Incoming order: A live 45 second countdown	Phase One
d-job	Job detail: Address with the high-rise notes, payment type, and the driver and truck for the run	Phase One
d-status	Status updates: Each step the driver confirms is the step the customer sees	Phase One
d-photo	Photo proof: Mandatory: the order cannot close without it	Phase One
d-cash	Cash collected: For cash on delivery the driver marks the cash as collected	Phase One
d-wallet	Wallet and settlements: No commission: the gas price and the delivery fee are the dealer’s in full	Phase One
d-fleet	Fleet and stock: Drivers and trucks as separate records, stock by brand and size, delivery radius	Phase One
d-add	Add a driver or truck: A driver with a phone number and a licence photo, or a truck with its plate	Phase One
a-dash	Dashboard: Orders today, live, late, escalated, GMV and platform fees, and what needs a person now	Phase One
a-orders	Live orders: Every order with its full trail	Phase One
a-suppliers	Suppliers and approvals: New dealers from the website form, with their documents, and KPDN licence expiry flags	Phase One

a-map	Supplier map: Static heat map of dealers with radius circles on a stylised Johor Bahru, not to scale	Phase One
a-settle	Settlements and fees: Weekly payouts with cash order fees netted, the platform fee setting (pending the price audit), promos and reports	Phase One

Background

The lane to own, the reading rules this page follows, every term placed by layer, and what is applied and what comes next.

The lane to own

Own this now	Resist this
The household cylinder, 14 kg, swap or new, in one district at a time: Johor Bahru first.	Everything for everyone: commercial C50, hardware sales, every state at once.
The licensed dealers already on the road, with no commission, so supply says yes.	Competing with a brand's own app on price: the price is the law's, the service is ours.
The controlled price printed first, as the law requires, said plainly wherever a customer decides.	A live map, a loyalty programme and a smart device before the first thousand orders.
The reminder: never caught mid-cook, first by rhythm, later by the regulator.	Drivers forced into an app they will not open: watch adoption, keep the fallback ready.

Source Brand Creation tab (positioning) · Competitors tab (where NakGas wins) · the audit, Verdict

The reading rules

1. **Plain words first.** The meaning, then the number, then the unit.
2. **Every short form written out.** On first use, with the short form after it.
3. **Facts are dated, reads are marked as reads.** The controlled price is a fact; a fee option is a read until the audit.
4. **Nothing invented.** A fact not in the briefs is written "to confirm", never guessed.

The terms, placed by layer

Gas

LPG
Liquefied petroleum gas: the cooking gas in the cylinder.

14 kg
The household cylinder, the hero of Phase One. 12 kg depends on the brand; C50 is commercial, Phase Two.

Swap, new
Swap: hand over the empty, pay for the gas. New: a first cylinder, its price set by the dealer and added at checkout.

Controlled price
RM1.90 a kilo, RM26.60 for 14 kg, set by KPDN on 8 Apr 2026, Peninsular, confirmed for Sabah and Sarawak in the audit.

Regulator
The valve on the cylinder. The smart one, Phase Two, reads the balance.

Api biru
The blue flame: a healthy burn, the brand's idea, kept since 20 Oct as the blue variation inside the green mark.

Rules and money

KPDN
Kementerian Perdagangan Dalam Negeri dan Kos Sara Hidup: licenses dealers, sets the controlled price, requires unbundled bills.

SSM
Suruhanjaya Syarikat Malaysia: the business registration a dealer shows at onboarding.

PDPA

Personal Data Protection Act 2010: consent before details are kept, on the form and in both apps.

FPX, e-wallet, COD
Online banking, a wallet app, or cash on delivery: the three ways to pay, through one Malaysian gateway or at the door.

Platform fee
The one line per order that is the platform's: RM3.00 or RM3.50, pending the price audit.

SST, GMV
Sales and service tax, 8 percent on the build price. Gross merchandise value: everything sold through the platform, on the admin dashboard.

Build and operations

Phase One
The five week build: three products, the website, the order engine, the heat map.

Phase Two
Not priced: the smart regulator, live map, messaging fallback, C50, Chinese and Tamil.

Week 1
The Monday after the deposit clears. No calendar date exists until then.

OTP
One-time password: the six digit code by SMS that logs a customer or a dealer in. No password.

Radius, escalation
How far a dealer delivers; what happens after four declines in a row: an admin assigns.

Settlement
The weekly payout to dealers from the wallet, cash orders netted, approved in admin.

Applied, and next

Applied

- The prototype: 33 screens across three products, both languages, the engine and the bill live.
- The flame mark, redrawn 9 Oct, in every file and on the phone's home screen.
- The website, built in both languages with the real screens, on the Website tab.
- This Codex: the product explained for three readers.

Next

- Navin's answers to the eleven questions above, the name first.
- The deposit, then Week 1: the brand sprint and the UI/UX sign-off in Week 2.
- The price audit closes the fee; the admin setting follows it.
- The dealer form wired into the approvals queue; the privacy policy written.
