The design system, light

One flame, one green with a blue variation, two typefaces, sixteen icons and the parts the three products are built from. Every value on this page is a token in assets/brand.css: change it there, never in a screen. The reasons behind the brand are on Brand Creation; the brand on one page is on Final Brand.

Decided by Brand Method, 6 Oct 2026; green with a blue variation since 20 Oct 2026

1

What the name means

NakGas: “nak gas”, what a household says the moment the cylinder runs out. I want gas. The green flame is the proof that the gas is good. Each word gives the design one job. Name and colour set on Tue 20 Oct 2026.

Word	Meaning	What it gives the design
nak	The most everyday Malay word for want: the moment of need	Urgency you can see: the order button first on every screen, short flows, times on every status
gas	The product, LPG, and the answer to the need	The honest bill: the KPDN price first, one fee, nothing hidden
The green flame	The flame of a clean burn: green as the one accent, the blue variation our mothers read kept inside it	The mark, and the one colour that means gas

2

What the meaning asks of the design

Six asks. Each is answered by one part of the system, and only one.

“Nak gas” asks for speed you can see

Answered by the order status steps and the 45 second countdown: the customer and the dealer both see time moving.

Components

“Fair” asks for an honest bill

Answered by the itemised bill: the KPDN price on the first line, every fee named, figures aligned.

The bill

“The flame” asks for one colour that means gas

Answered by flame green as the only accent: the logo, the primary button, the active state. About 5% of a screen. The blue stays only as the variation set; the inner cone is mint #8FDDB8.

Colour

“Your dealer” asks for a person, not a fleet

Answered by the dealer card: a name, a truck plate, the KPDN check. Never a phone number.

Dealer card

“Malaysian” asks for type that sets Malay well

Answered by Plus Jakarta Sans for display and Inter for the interface, both tested on long Malay words.

Type

“Calm in the kitchen” asks for quiet screens

Answered by white and base, hairlines instead of boxes, and colour only for status signals.

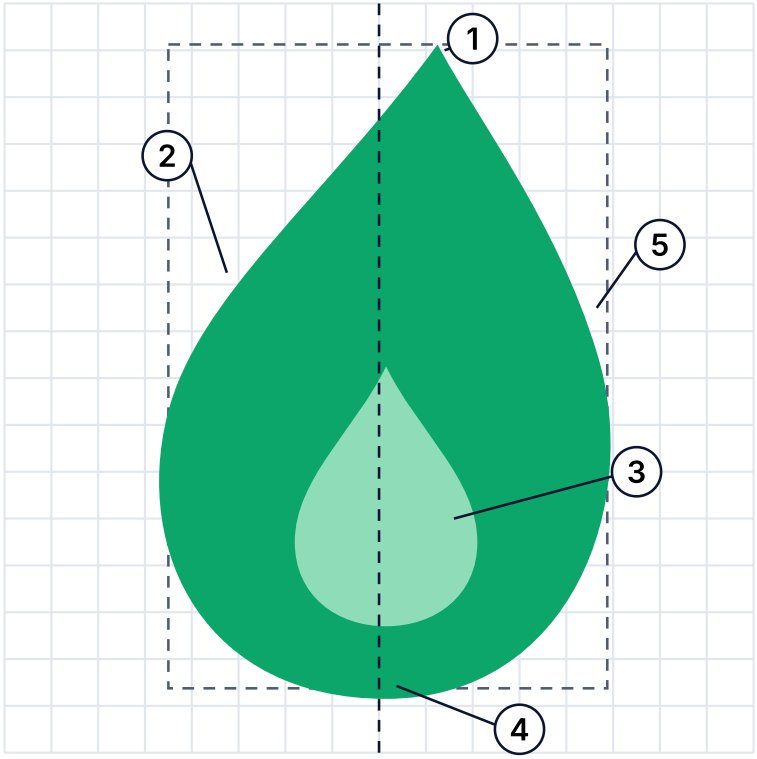

App screens

3

The logo

A green flame with the blue inner cone of a clean burn. Two paths, two colours, drawn on a 64 unit grid; green with the blue variation since 20 Oct 2026. The files are in Final Brand, Files.

20 Oct: the flame was redrawn (a fuller flame with a curling tip and a small left tongue, the blue variation as a teardrop at the base) because the 12 Oct mark read as a water drop, and the wordmark was tried in Rubik and Unbounded before Outfit 800 was kept. By evening Zieel asked for the first logo back ("the same logo like the first time"), so the teardrop flame with its inner cone and the Outfit wordmark returned, in green: emerald with a mint cone, no blue. Every file in assets/ and every inline copy was regenerated from one source (tools/flame-source.svg, tools/wordmark.py); the 12 Oct drop and the Outfit outlines stay in .bak-20261020/. Chosen from a sheet of eight faces, three flames and five colour sets (tools/logo-20oct.html).

The mark on its 64 unit grid. Dashed: the centre axis and the box the flame sits in.

1. **The tip** leans 5.5 units right of the centre axis, 3.5 units from the top: a flame bends, it never stands square.
2. **One tongue.** The left shoulder swells and sweeps up to the tip in one stroke: no second tongue, no notch, so the mark stays whole at 16 px and on a tile.
3. **The inner cone** is the flame itself at 40 percent, 15 by 22 units, centred on the axis and seated 4.5 units above the foot: the blue variation of a clean burn, the proof that the gas is good. The inner cone is mint #8FDDB8 (--gs-core); the all-blue variation set (assets/*-blue.svg) keeps the first blue pair, #1550F5 with #8DB0FF.
4. **The round base** sits 5.5 units above the grid's foot, like a flame on its burner.
5. **The box** is 37.5 by 55 units, centred on the axis. Every lockup aligns to this box, never to the 64 unit tile.

Clear space and minimum sizes

The unit is **C**, the width of the inner cone: 15 units, a little over a quarter of the flame's height. Keep at least one C clear on every side of any logo.

Piece	Smallest on screen	Smallest in print
Mark alone	16 px tall	6 mm tall
Horizontal lockup	24 px tall (about 68 px wide)	10 mm tall

Piece	Smallest on screen	Smallest in print
Stacked lockup	48 px tall	18 mm tall
Below 16 px	Use the favicon tile: the white flame on flame green	

Redrawn, Fri 9 Oct 2026, three rounds

Bazil, 9 Oct: "make the icon logo of the blue light better", then "better icon and logo as well". The 6 Oct mark read as a water drop inside a flame. Round two drew a classic flame with a second tongue (G) and made the inner cone the flame itself. Round three asked what survives at 16 px and on a tile: the single leaning tongue (K) does, the ring, the twin and the round body do not. K is the mark now; the wordmark moved to Outfit 800 as outlines in the same pass.

BEFORE, 6 OCT

Droplet cone, kinked body. Replaced.

ROUND TWO, G

Classic flame, second tongue. Held one day: the notch fills in at 16 px.

CHOSEN, K

One tongue, leaning, the inner flame at 40 percent. Whole at every size. In every file and page; green with the blue variation since 20 Oct. The drafts beside it stay in the blue of 9 Oct.

REJECTED, ROUND THREE

J, on a burner ring: says cooking gas, turns to a saucer at 16 px. L, twin tongues: the small tongue reads as a tear. M, round body: the bump again.

Clear space: one C on every side, where C is half the height of the flame.

Mark at 16 px

Horizontal lockup at 24 px

Favicon tile at 16 px

Lockups, on light and on green

Horizontal, the main logo
The app header, the website, documents, the truck door.

Stacked
The splash screen, square posts, stickers.

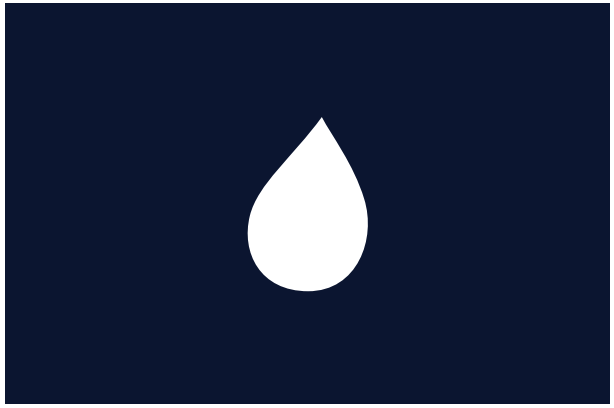

Wordmark
Where the flame is already on screen, such as beside the app icon.

Horizontal on green
White name, white flame, the blue variation kept.

Stacked on green
The splash screen and the store feature image.

One colour
Single-colour print: the cone is cut out, never filled.

4

Colour

Flame green is the one accent, with the blue variation kept inside the mark. White and base carry the screen, ink carries the words, and three signal colours speak only about an order. Decided Tue 20 Oct 2026; the all-blue set of 6 Oct stays as a variation.

The greens, and the blue variation

Flame green
#0CA66A · --gs-flame
The one accent: the mark, display accents, the primary button fill, the active state. 3.1:1 on white, so never small text

Text-safe green
#08854C · --gs-flame-d
Links and small labels on white, 4.7:1

Mint cone
#8FDDB8 · The inner cone of the flame; the all-blue variation keeps #1550F5 with #8DB0FF. The inner cone of the flame, and the colour of the blue variation set

Wash
#E9F7F0 · --gs-wash
A selected row, an info note

Neutrals

Ink
#0B1530 · --gs-ink
Headlines, body, numerals

Steel
#4F5B76 · --gs-steel
Secondary copy

Mist
#657088 · --gs-mist
Small print, disabled states and hairline marks. Darkened on 6 Oct from #8A93A8 so it passes AA

Line
#E2E6EE · --gs-line
Every hairline

Base
#F5F7FA · --gs-base
The canvas behind everything

White
#FFFFFF · --gs-surface
Cards and sheets

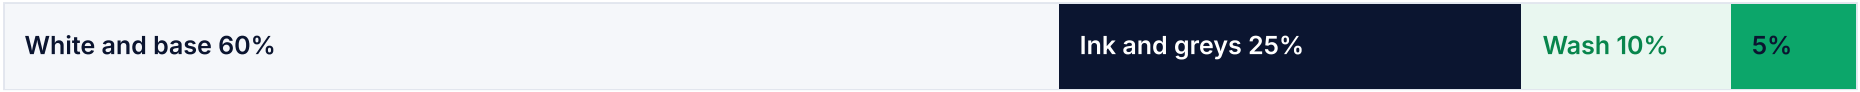

Signals: about an order, never decoration

Low gas amber
#E8890C · --gs-low
Signal: running low, late. A fill under ink text

Delivered green
#12805A · --gs-ok
Signal: delivered, verified

Failed red
#C4292E · --gs-bad
Signal: cancelled, failed

Ratio on a screen

About 60% white and base, 25% ink and greys, 10% wash, 5% flame green, and one accent-filled element per screen. Why green with a blue variation, decided 20 Oct 2026: Bazil asked for a green flame with the blue kept (“use green flame colour keep the blue, as variation”, “can be a combination but if green is better go ahead”). Pure green in Malaysia collides with Grab (#00B14F, delivery) and PETRONAS (#00A19C, gas), so ours is a deeper, bluer green, and the blue variation keeps the clean-burn story the app and the website copy are built on. The market’s other colours stay taken: yellow for Gasbee, MyGaz and MiraGas, red for Petros. The all-blue set (flame #1550F5) is kept as a variation. **Our read**

Contrast, computed

WCAG 2.1 contrast ratios, worked from the token values. AA asks 4.5 to 1 for normal text and 3 to 1 for large text (24 px, or 19 px bold) and for icons and control edges.

Foreground on background	Ratio	Normal text	Large text, icons	Rule
Ink on white	18.04	**Pass**	**Pass**	Body and headings
Ink on base	16.81	**Pass**	**Pass**	Body on the canvas
Steel on white	6.80	**Pass**	**Pass**	Secondary copy
Steel on base	6.33	**Pass**	**Pass**	Secondary copy on the canvas
Flame green on white	3.14	**Fail**	**Pass, just**	The mark, display words, button fills; never small text
Text-safe green on white	4.70	**Pass**	**Pass**	Links, small labels, active icons
Text-safe green on wash	4.26	**Fail**	**Pass**	Selected rows and in-progress chips: 19 px bold or larger, or ink on wash for small text
Ink on flame green	5.74	**Pass**	**Pass**	The primary button: white text on the deep green #08854C (4.7:1); the bright flame green never sits under white text
White on flame green	3.14	**Fail**	**Pass, just**	Large text only: the reversed logo on a green field
Blue variation on white	6.00	**Pass**	**Pass**	The blue variation set, where blue is the accent
White on ink	18.04	**Pass**	**Pass**	Dark panels, the truck plate
Delivered green on white	4.93	**Pass**	**Pass**	The verified mark

Foreground on background	Ratio	Normal text	Large text, icons	Rule
Failed red on white	5.67	**Pass**	**Pass**	Error text, field borders
Chip text #0B5E41 on #E8F5EF	6.96	**Pass**	**Pass**	Delivered chip
Chip text #8F1D21 on #FDECEC	7.77	**Pass**	**Pass**	Cancelled chip
Chip text #8A4F00 on #FFF4E5	6.04	**Pass**	**Pass**	Late chip, amber text anywhere
Ink on low gas amber	6.88	**Pass**	**Pass**	A low-gas banner: ink on an amber fill
Flame green on ink	5.74	**Pass**	**Pass**	Display words on dark panels
Mist on white	4.97	**Pass**	**Pass**	Small print and source lines
Mist on base	4.63	**Pass**	**Pass**	Small print on the base canvas
Low gas amber on white	2.62	**Fail**	**Fail**	Never text, never a lone icon: a fill under ink
Blue variation on flame green	1.91	**Fail**	**Fail**	Inside the mark only, where it is a second tone, not information

One token cannot carry text. Low gas amber (#E8890C) fails AA as text on white, so it fills chips and dots under ink; as text or a lone icon it becomes --gs-low-text, #8A4F00. Mist was darkened on 6 Oct from #8A93A8 to #657088 so small print passes. Flame green (#0CA66A) is 3.1:1 on white, so it fills and marks; as text it becomes --gs-flame-d, #08854C, and on a green fill the text is ink.

5

Type

Two families in the product, each with one job, and the wordmark drawn once as outlines in Outfit 800 (since 9 Oct; Rubik and Unbounded were tried on 20 Oct and dropped: its single-storey g and round a sit with the flame; the file is paths, so no page needs the font). Plus Jakarta Sans for display: designed in Jakarta, it reads naturally in Malay. Inter for everything read in the interface. No third family, and no typewriter or code fonts.

DISPLAY

Gas sampai.

Plus Jakarta Sans, weights 700 and 800. Greetings, screen titles, big numbers. Tracking slightly tight, never below 18 px.

INTERFACE

Tak payah call.

Inter, weights 400 to 600. Body, labels, buttons, the bill. Prices use tabular figures so the columns line up.

The scale: six sizes

Role	Face and weight	Size / line	Sample
Display	Plus Jakarta Sans 800	28 / 34	**Gas sudah sampai.**
Title	Plus Jakarta Sans 700	22 / 28	**Status pesanan**
Heading	Inter 600	18 / 24	**Pengedar ditetapkan**
Body	Inter 400	16 / 24	Pesanan diterima. Abang gas sedang dalam perjalanan.
Small	Inter 400	14 / 20	Fi platform & pemprosesan dikenakan sekali bagi setiap pesanan.
Label	Inter 600	12 / 16	**Kediaman bertingkat · Ada lif**

Floors from the brief: body never below 14 px, labels never below 11 px.

Malay in a narrow column

Malay words run long. Every screen is checked at 300 px wide with the longest strings, in both languages.

Pemberitahuan penghantaran

Kami akan memaklumkan anda sebaik sahaja pengedar menerima pesanan, semasa lori dalam perjalanan, dan apabila gas sudah sampai.

LPG 14 kg, harga kawalan KPDN	RM26.60
Caj penghantaran	RM3.40
Fi platform & pemprosesan	RM3.50
Jumlah	**RM33.50**

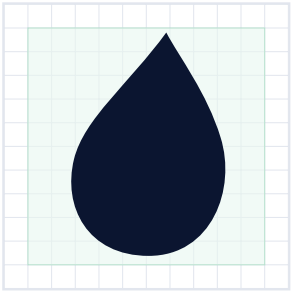

6

Icons

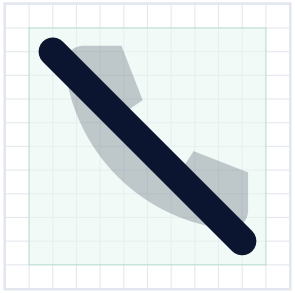

A duotone set drawn for NakGas on a 24 unit grid (20 Oct, Zieel: "high level detailed icons"): a solid layer in the current colour and a second layer at 22 percent for depth, 2 units of air at the edge. 67 icons, one source (tools/icons.py) feeding the app and the website. Ink in text, text-safe green when active; in list rows they sit on a 38px tile of the wash.

Tong gas on the grid. Wash: the 20 unit live area.

The flame: the mark itself at icon size, the cone in the lighter layer.

Tak payah call: the handset in the light layer, the slash solid.

7

Components

The parts every screen is built from, live in HTML and CSS with the brand tokens. Shown in Bahasa Malaysia; the English strings are in the captions. Names and the truck plate are illustrative.

Buttons

48 px tall, 10 px radius. One primary per screen. English: Order now, Schedule, Cancel order, Pay.

Inputs

Label above, 48 px field, 10 px radius. Focus is a 2 px flame green edge; an error is a red edge with the reason underneath.

Nombor telefon

+60 | 12 345 6789

Jenis rumah

Nombor unit

Contoh: 21-07

Nombor unit diperlukan untuk kediaman bertingkat.

Pesan sekarang

Jadualkan

Batal pesanan

Bayar

Primary, secondary, text and disabled.

Order status chips

10 px radius, a dot and a word. Green wash while the order moves, then a signal colour.

- Disahkan — Confirmed
- Pengedar ditetapka — Dealer assigned
- Dalam perjalanan — Out for delivery
- Sampai — Delivered
- Lewat — Late
- Dibatalkan — Cancelled

Order status steps

Four steps with the time each was reached. No live map in Phase One: the steps are the tracking.

- Disahkan — 2:14 ptg
- Pengedar ditetapkan — 2:15 ptg
- Dalam perjalanan — 2:31 ptg
- Sampai

Confirmed, dealer assigned, out for delivery, delivered. “ptg” is petang, the afternoon.

The itemised bill

The KPDN line always first. Figures right-aligned in tabular numerals. Option B fee shown; the fee waits on the price audit.

List row

Bare icon, title, meta, status, chevron. Used for order history, addresses and settings.

LPG 14 kg × 1 Harga kawalan KPDN	RM26.60
Caj penghantaran	RM3.40
Fi platform & pemprosesan Sekali bagi setiap pesanan	RM3.50

8

App screens, a sample

Six screens from the prototype, recaptured on 12 Oct 2026, each shown as a whole phone at about its real size. Every screen runs live on The App; all 33 are listed in the Codex.

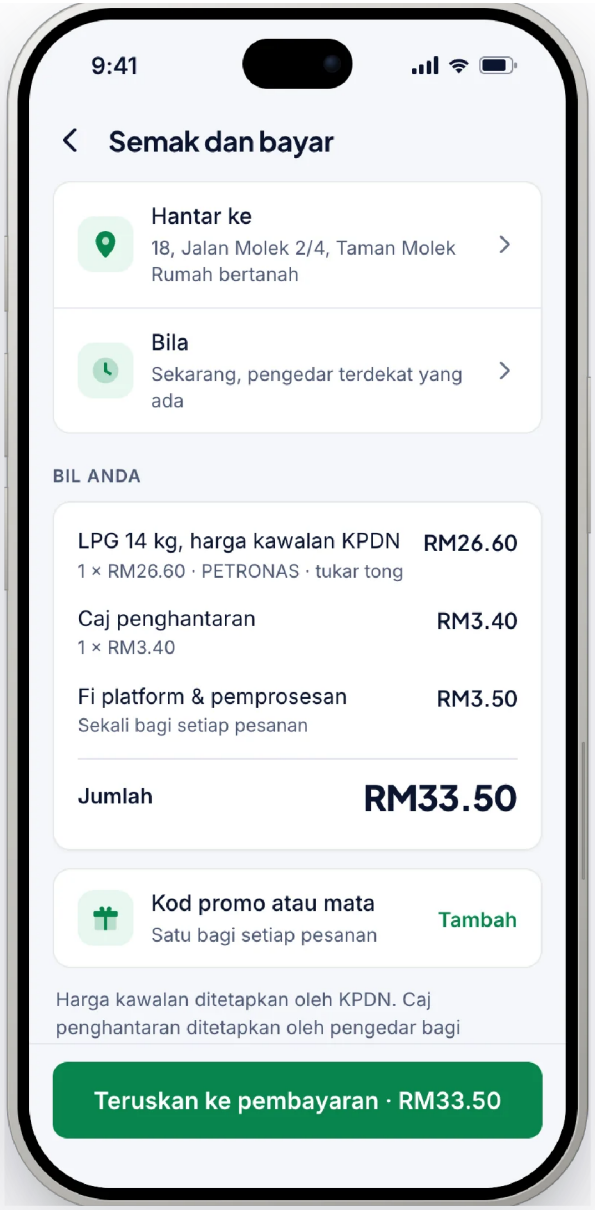

Home

The reminder from her own rhythm, the usual order, one primary button.

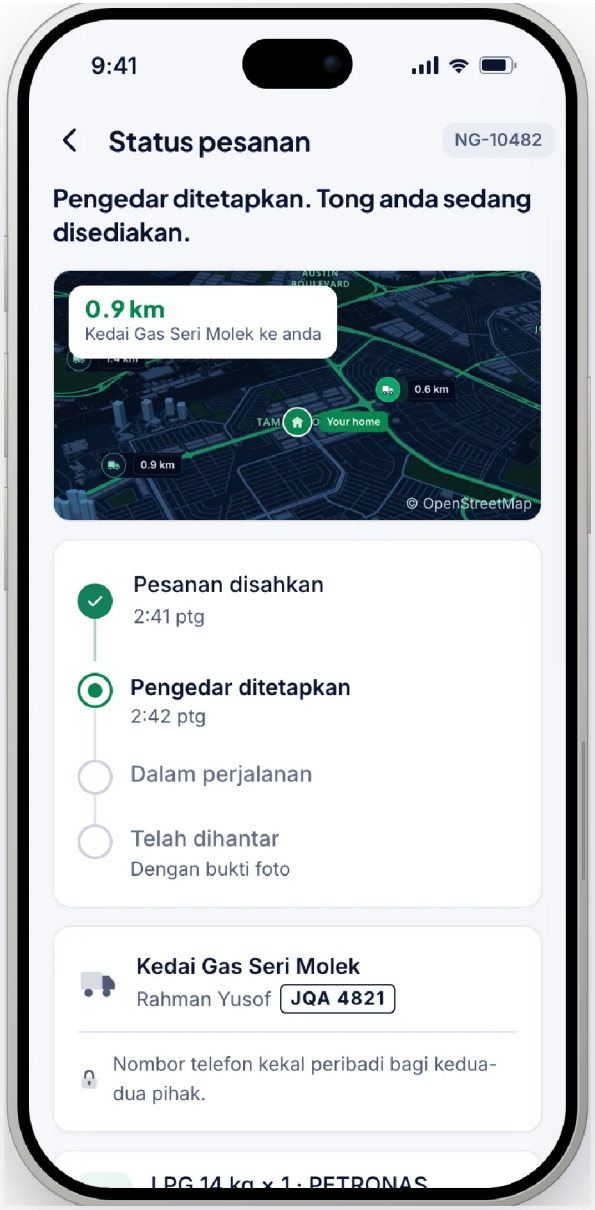

Order

Swap or new, size, brand and quantity; one accent-filled element.

Checkout

The controlled price first, the fee once per order, before payment.

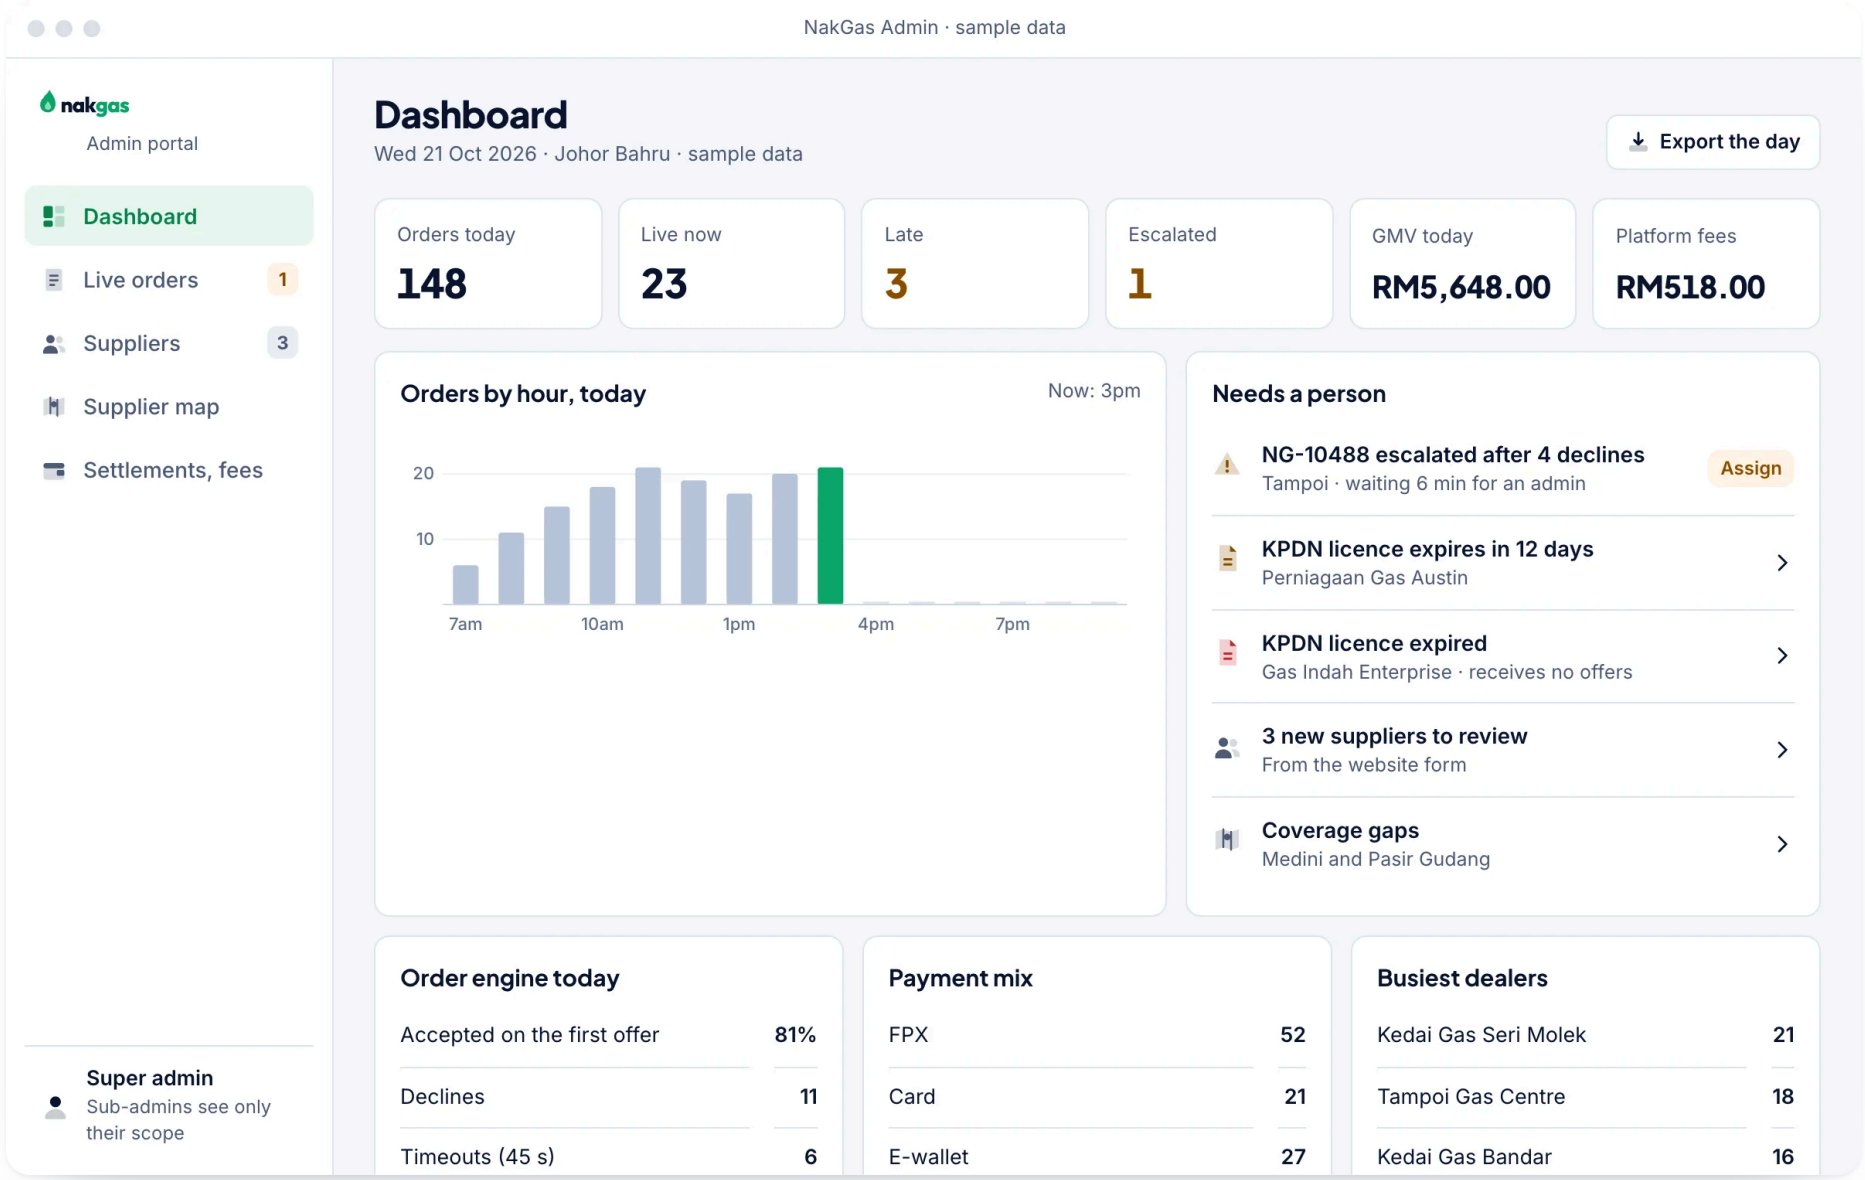

Tracking

Four statuses, a name and a plate, never a phone number.

Dealer, incoming

The 45 second countdown, accept or decline.

Admin dashboard

Orders today, live, late, escalated, and what needs a person now.

9

Do and don’t

The rules a developer or a new designer breaks first.

Do

- One accent-filled element per screen: usually the primary button.
- Put the KPDN price on the first line of every bill and receipt.
- Icons from the duotone set only, ink or text-safe green; in rows on the wash tile, never a third colour.
- Use 14 px radius on cards and 10 px on buttons, inputs and chips; documents stay square.
- Space on 4, 8, 12, 16, 20, 24, 32 and 40 only; 16 px screen gutter.
- Check every screen at 300 px wide in both languages.

Don’t

- Fill a field behind a paragraph with flame green, or use it as a gradient.
- Use the blue variation, the flame green or the amber fill colour for small text.
- Put an icon in a tinted tile, or add shadows other than the tab bar’s hairline.
- Mix pill shapes with 14 px cards on one screen.
- Show the dealer’s phone number anywhere in the customer app.
- Add a mascot, 3D, glass or illustration to the interface.

Brand Method · VIN Industries · NakGas · Design · written Tue 6 Oct 2026, the name changed to Gaslah Mon 12 Oct 2026 and to NakGas Tue 20 Oct 2026; the flame green with a blue variation since 20 Oct 2026. Tokens: assets/brand.css. Contrast ratios computed from the token values with the WCAG 2.1 formula. Internal, for Navin only.
Confidential under the NDA; not for any portfolio.
