nakgas

Cooking gas, brought in and fitted, in two taps

Every licensed dealer in Johor Bahru on one app, nearest first, with no commission.

Raising
RM60,000

Ordering a cylinder is still a phone call

Find a number first

The sticker peels, the chat scrolls away, a new home has none.

Call, then wait

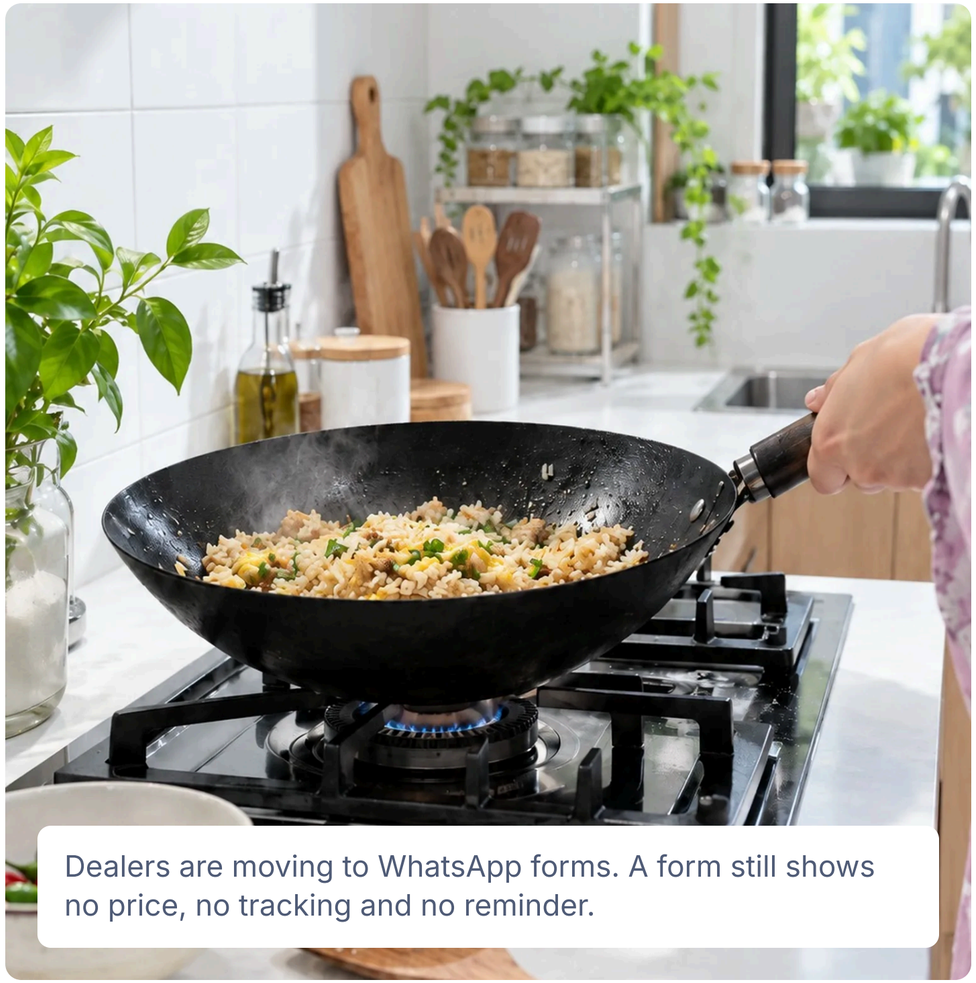

Closed, out of stock or not answering, and no word on when it comes.

No price before he arrives

A surprise charge for the stairs. No receipt, no photo.

No warning

The flame dies mid-cook, with the wok still on the stove.

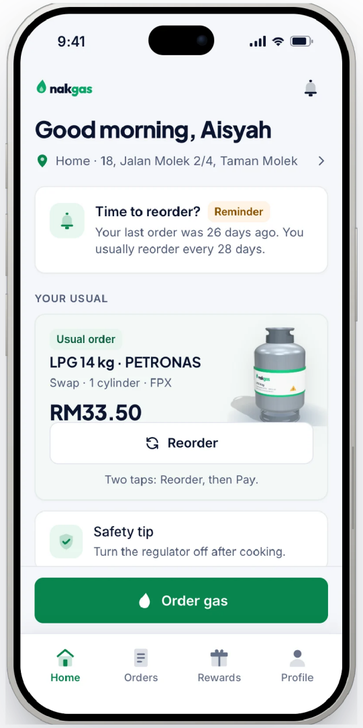

Dealers are moving to WhatsApp forms. A form still shows no price, no tracking and no reminder.

Nak gas?

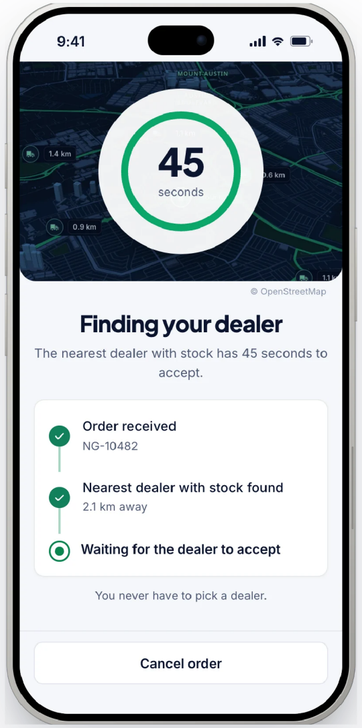

"I want gas" is what a household says the moment the cylinder runs out. The name is that moment. The app is the answer.

Two taps, and the nearest licensed dealer is on the way

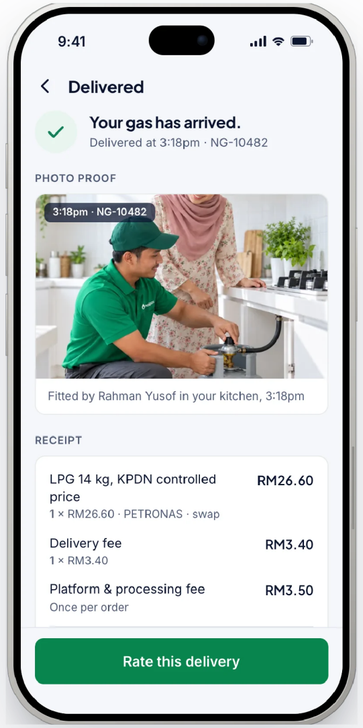

1 Two taps

The usual order waits on the home screen: Reorder, then Pay.

2 45 seconds

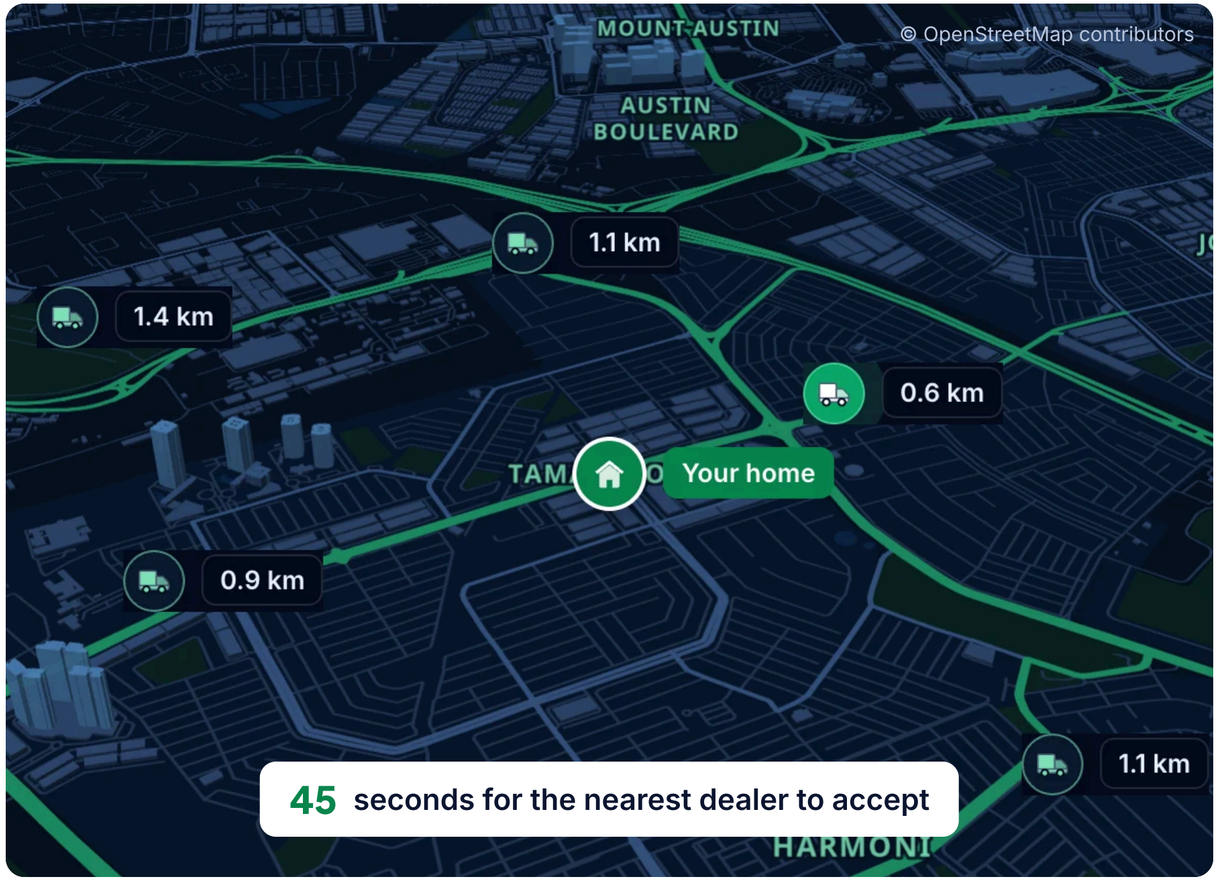

The nearest dealer with stock accepts, or the next one is offered.

3 Brought in and fitted

A photo at the door and a receipt close every order.

An order always ends with a dealer, or with a person

1. **Order**
   The customer confirms and pays, or picks cash at the door.
2. **Nearest first**
   The nearest dealer online, inside its radius, with stock.
3. **45 seconds**
   Accept, decline, or no answer.
4. **Next nearest**
   The same offer, one dealer further out.
5. **After four declines, the team**
   An admin places the order by hand.

The dealer brings it in and fits it

Into the kitchen
Not left at the gate. High-rise floor, lift and unit are known before he sets off.

Fitted the right way
The cylinder upright, the clip-on regulator pressed onto the valve, the hose to the hob.

Proof on every order
A time-stamped photo and a receipt, kept in the order history.

The dealer's name and truck plate are shown. Personal phone numbers are never shared.

Dealers pay nothing. The orders come to them

RM0

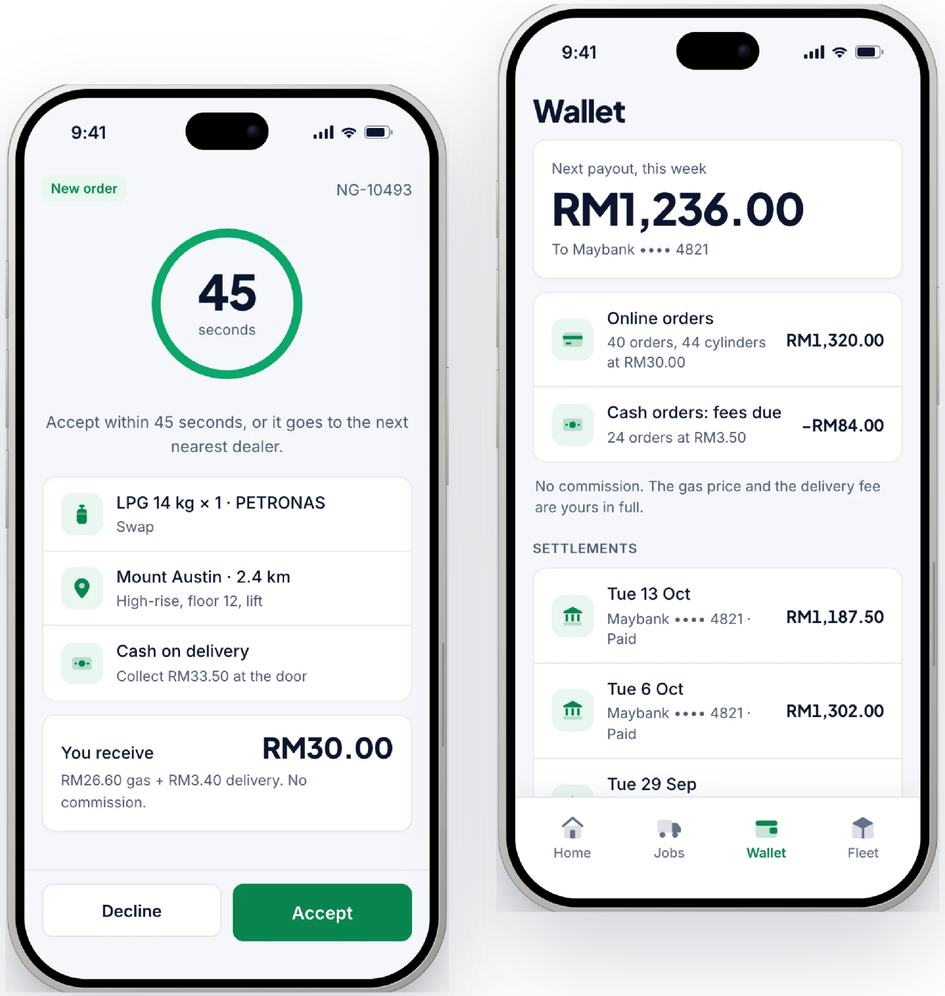

Commission. The gas price and the delivery fee are the dealer's, in full.

45 seconds

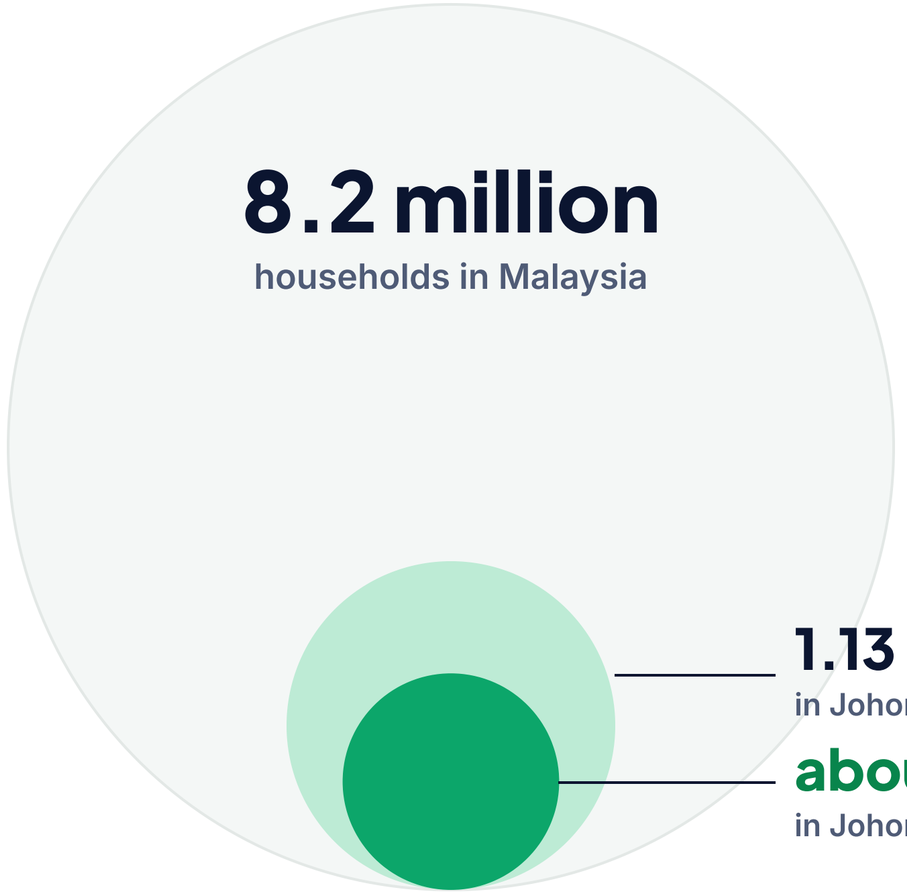

To accept or pass. Orders from their own area, nearest first, inside their radius.

1 app

For the shop and the drivers. Jobs, photo proof, cash, wallet, fleet and stock.

About 490,000 Johor Bahru homes cook on a cylinder

Nearly every home that cooks on gas uses a cylinder. Only 21,690 homes in the whole country have piped gas.

One fixed price. A 14 kg cylinder is RM26.60, set by KPDN since 2010. The market competes on ease and service, never on the gas.

Every brand, one app. Dealers of all brands join, so the customer never has to know who sells what.

Johor Bahru alone is millions of cylinders a year

2.9 to 5.9 million

Cylinders a year in Johor Bahru homes.

RM99 to 197 million

Spent on those orders each year, at RM33.50 delivered.

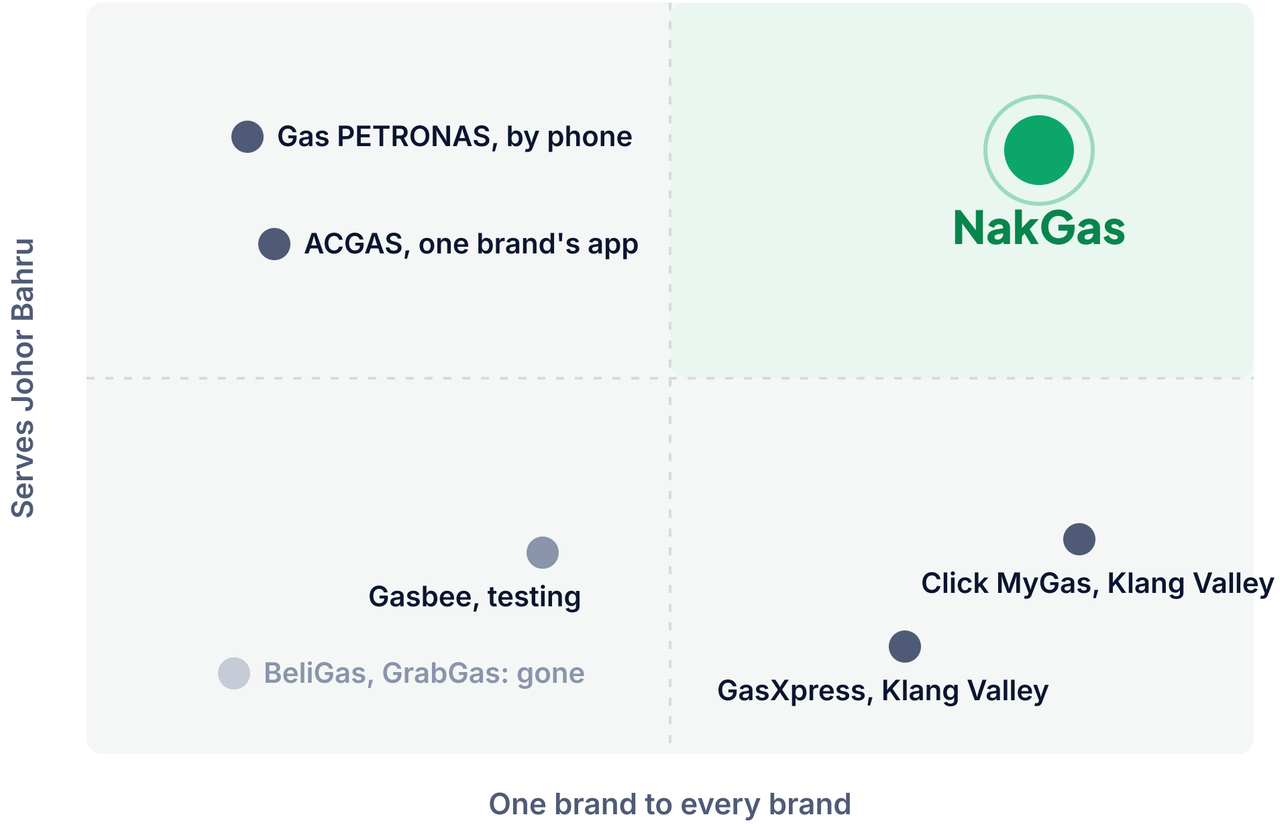

RM10 to 21 million

Platform fees a year if every order carried the RM3.50 fee.

ARITHMETIC

How these are worked out. About 490,000 households, each buying one 14 kg cylinder every one to two months (6 to 12 a year), at the RM33.50 delivered price and the RM3.50 fee. The buying rate is an assumption to validate in the first months of orders.

No app serves every brand in Johor Bahru

The PETRONAS app ended in 2023. Its home delivery is a phone number for one brand.

The multi-brand apps stay in the Klang Valley: Click MyGas in six areas, GasXpress with four dealers.

Two have already closed. The gap is real, and so is the lesson: dealers must earn more, not pay more.

Read 13 October 2026 on each rival's own site, store listing and code.

One platform fee per order: RM3.50

RM33.50
what the customer pays for one 14 kg cylinder in Johor Bahru

Delivery
the dealer's

Fee
per order

RM30.00

The dealer keeps the gas price and the delivery fee, in full.

RM0.67

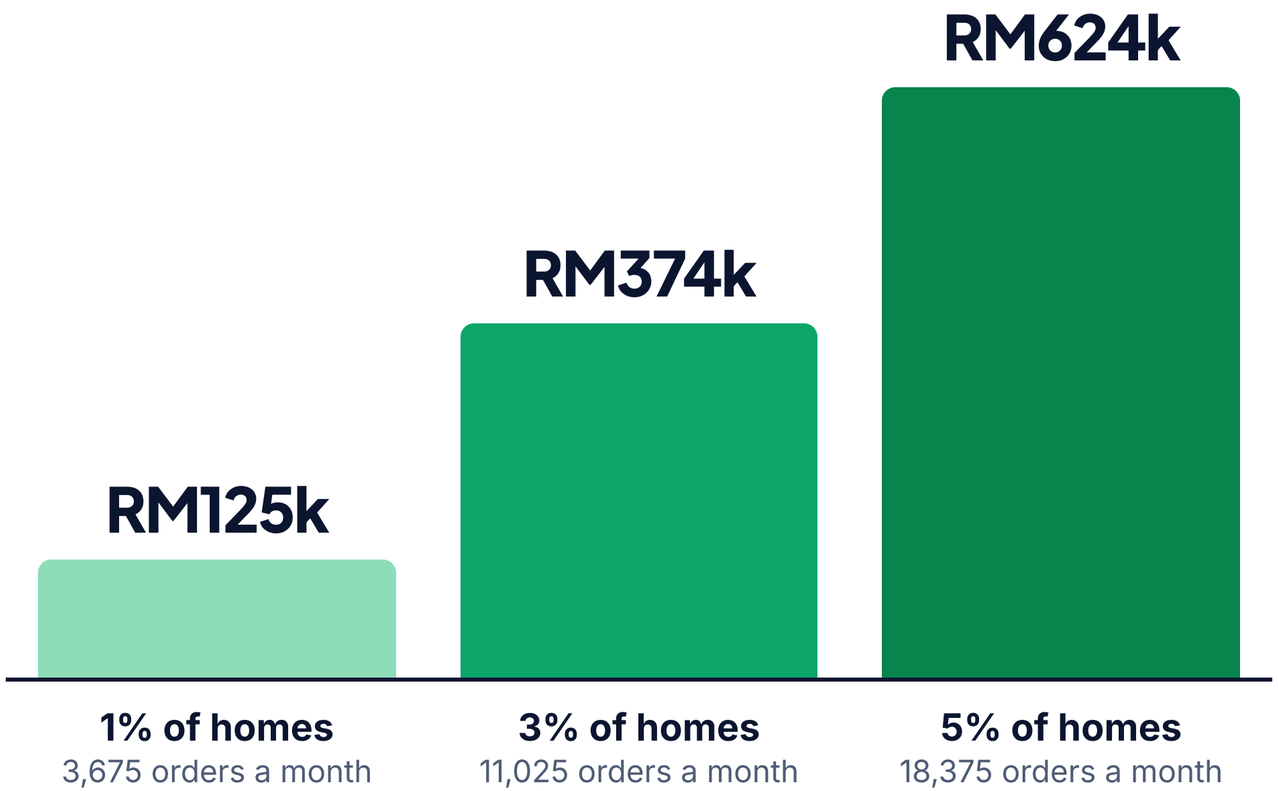

The payment gateway takes about 2% on an online payment.

RM2.83

NakGas keeps the rest. On a cash order, the full RM3.50.

Option B in the plan. The fee is a setting in the admin portal, pending the price audit.

What a small share is worth

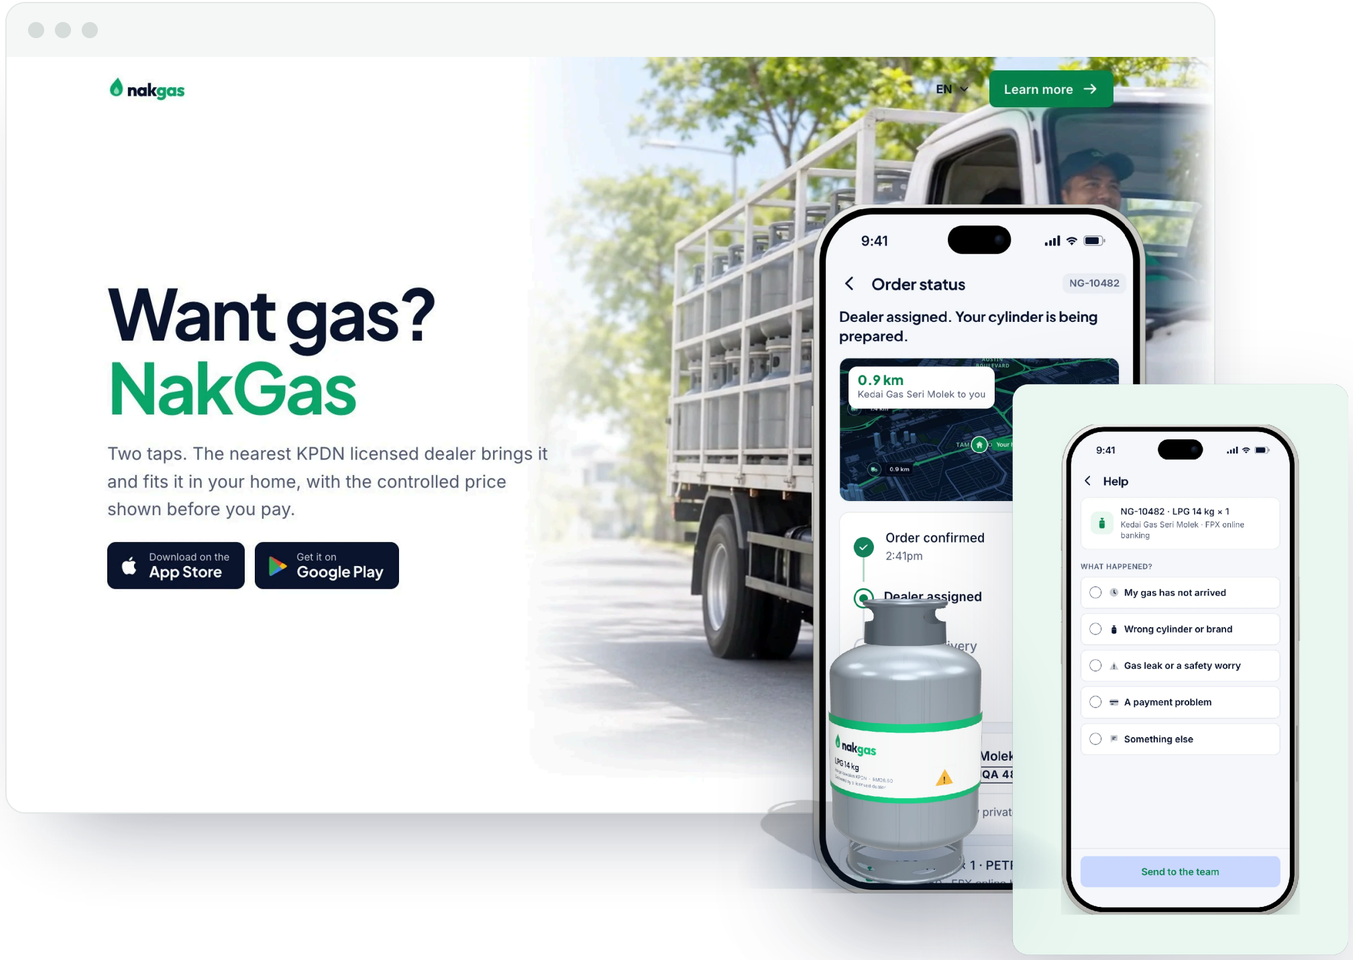

Fee income a year, in Johor Bahru

Homes	**about 490,000**
Cylinders per home a year	**9**
Kept per online order	**RM2.83**
1% of homes ordering	**RM124,803**
3% of homes ordering	**RM374,409**
5% of homes ordering	**RM624,015**

Scenarios, not a forecast. Nine cylinders a year is the middle of the six to twelve range. Cash orders keep RM3.50, so these are on the low side. Other cities are not counted.

The product is built and working

- **The brand:** name, flame, colours and type.
- **38 clickable screens** in Malay and English: the customer app, the dealer app and the admin portal, with no dead ends.
- **The website:** seven pages, a video hero, the order engine on a real Johor Bahru map, 3D cylinders tied to the bill.
- **The research:** 17 rivals and channels read, the price audit framed.
- **The plan:** screen by screen and week by week.

Five weeks from the deposit to handover

Work	Gate	Week 1	Week 2	Week 3	Week 4	Week 5
Deposit, store and gateway accounts	Company's name					
Brand sprint, flows, wireframes		Signed off				
High fidelity screens		First build on a test link				
Order engine and apps		Engine, customer app, dealer app, admin				
Website live				Live		
Testing, stores, training, handover					Beta	Handover

Phase Two

A smart regulator reads the gas level, so the reminder comes from the real balance before the flame changes.

Weeks count from the Monday after the deposit clears. Store review time belongs to Apple and Google.

Six numbers, on the dashboard from day one

Accepted in 45 seconds
Share of orders the first dealer offered accepts.

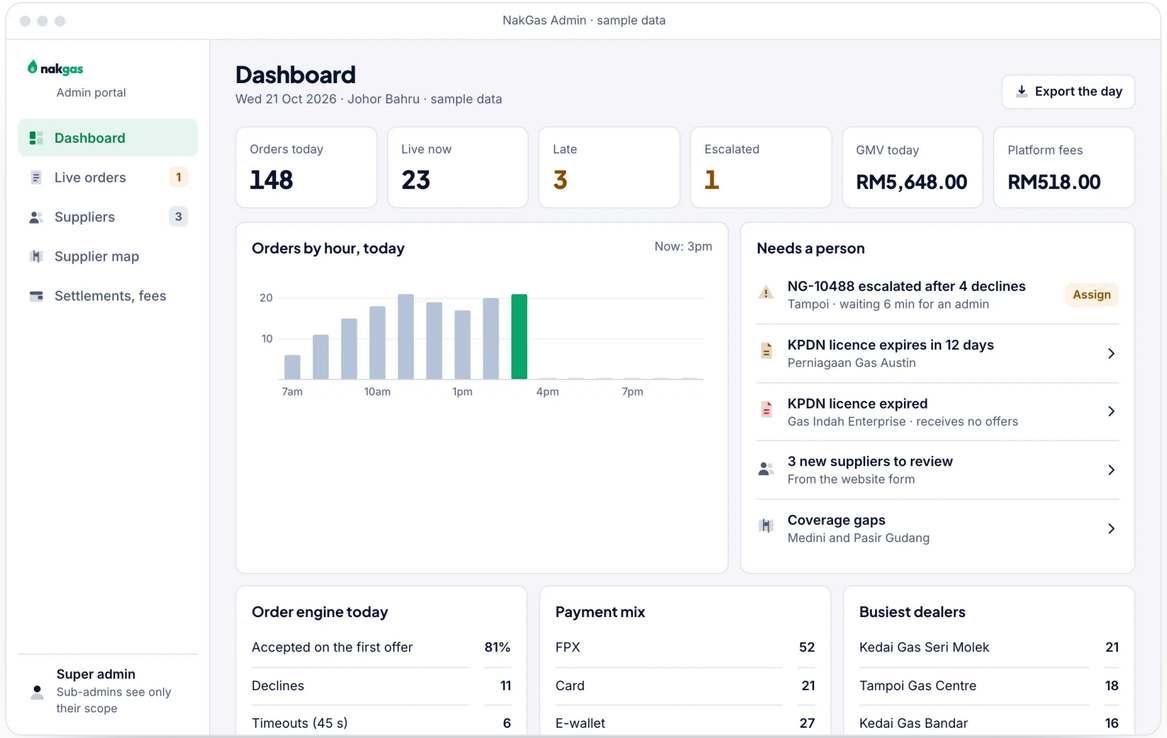

Time to door
Minutes from order to delivered, median.

Repeat orders
Customers who order again within 45 days.

Active dealers by area
Dealers online at least once a week.

Orders a week
Delivered orders, by area.

Fee earned
The platform fee after gateway costs.

A founder who knows how goods move, and a partner who builds

Raising RM60,000

The first round builds the app and launches it in Johor Bahru, with the licensed dealers already on the road.

The build Five weeks, RM48,000 before SST, with 8% SST	**RM51,840**
Accounts and launch Apple, Google Play, the gateway, and the first dealers in Johor Bahru	**RM8,160**
Grant track alongside Cradle CIP Spark, up to RM150,000	**Applied separately**

Where the figures come from

Gas price. RM26.60 for a 14 kg household cylinder is the KPDN controlled price, RM1.90 a kilogram, in force since 4 December 2010 (ihsanmadani.gov.my; Malaysiakini, 3 Dec 2010; The Star, 8 Apr 2026). Household cylinders were unchanged in the April 2026 commercial increase.

Delivered price. RM30.00 all in for 14 kg in Johor Bahru, RM26.60 gas plus RM3.40 delivery: Navin, call of 1 October 2026.

Households. Johor Bahru district 460,700 at the 2020 census (DOSM); about 490,000 in 2026 is Brand Method's arithmetic at the 2020 ratio. Johor 1,130,600 in 2024 (OpenDOSM). Malaysia 8.2 million (DOSM, Census 2020).

Piped gas. 21,690 residential customers nationwide at 31 December 2025 (Gas Malaysia Annual Report 2025).

Rivals. Read 13 October 2026 on each rival's own site, store listing, code and public data feed. The Gas PETRONAS Home Delivery app ended 31 January 2023 (TechTRP, 17 Jan 2023).

Market in orders and scenarios. Brand Method arithmetic: households times 6 to 12 cylinders a year, times RM33.50 or RM3.50; scenarios use 9 a year and RM2.83 kept per online order. The buying rate is an assumption to validate.

The bill and the fee. Option B, RM3.50 per order, is Navin's leaning on the call of 1 October 2026; the gateway at about 2% is his figure for Razorpay Curlec, to confirm.

The engine. 45 seconds and nearest first: Navin, 28 September 2026. Four declines to Admin: the scope of work. The map on slide 5 is OpenStreetMap data of Taman Molek.

Fitting. Domestic regulators in Malaysia are clip-on low pressure types (MS 1165); the cylinder stays upright (Energy Commission guidance).

The build and the round. RM48,000 before SST, five weeks: Brand Method proposal of 29 September 2026. First round of RM60,000: call of 1 October 2026; the split of the RM8,160 is to confirm with Navin. Cradle CIP Spark: cradle.com.my, read 6 October 2026. App screens carry sample data.
